<p>Hi, I'm Mithra. I'm currently in my 2nd semester of B.Tech and honestly, I'm still in the "figuring things out" phase — and I'm okay with that.

I chose B.Tech because I've always been curious about how the technology around us is built. From the apps on our phones to the websites we browse every day, I wanted to understand what goes on behind the screen. Now that I'm here, I'm spending my time learning the basics, getting used to the subjects, and slowly finding what parts of tech I actually enjoy.

It's not all about studying though. I like trying out small things on my own — maybe it's writing a few lines of code, following a tutorial, or just reading about how something was made. I'm not an expert at anything yet, but I like the process of starting from zero and seeing small progress.

When I'm not doing college stuff, I'm usually listening to music , sketching , watching movies , hanging out with friends. I think having interests outside of academics keeps things balanced. I also like

the idea of creating something one day, even if it’s just a simple website or a small project that solves a tiny problem.

I made this portfolio as a place to collect whatever I learn and build during these four years. Think of it as my online diary for college life — a mix of learning, trying, failing, and trying again. I’m still at the beginning, but I’m excited to see how all these small steps add up over time..</p>
